Address

Myanmar/Yangon/ Thaketa

Date of birth

17/3/2000

Education

Bachelor of B.Sc Physics

East Yangon University

I am currently attending the University of East Yangon specializing in **B.Sc. Physics**. I have completed my second year and will be advancing to the **third year** soon.

Framework & Skill

- PHP , Laravel
- VueJs , Vuex , Vuetify
- Websockets , Pusher
- Cpanel , SSH
- Crontab , API
- Mail System

Language

English

Zin Min Htet

Senior Web Developer

A highly accomplished and results-driven Senior Full-Stack Developer with **6+ years** of extensive experience specializing in the full-stack **Vue.js/Laravel** ecosystem. I am skilled at architecting and leading the development of high-performance web applications, robust **APIs**, and scalable **backend services**, and managing **production deployment** and operations.

GitHub - github.com/Zakerxa

Experience

2023 - 2025

Project Coordinator: Ma Khin U (Local Agency) for China-based Client

Senior Team Lead & Full-Stack Architect (Outsourced)

Team Leadership: Served as the Lead Developer and Team Lead, guiding the technical execution and successful **3-year** delivery of a major outsourced **Hybrid application**.

Architectural Migration: Managed the strategic integration of **Vue.js components** into an existing, large-scale **Laravel Blade** application, effectively modernizing the platform.

Server Management: Maintained full control over the production environment on a VPS, managing deployment, security, and optimization using direct **SSH** access and **cPanel**.

Full-Stack Development Projects (Freelance)

[E-Learning Platform] - teachhub.zakerxa.com

Achievement: Architected and deployed the entire e-learning platform infrastructure and UI, delivering a full-scale **SPA** within a **2-month** deadline.

Technical Focus: Utilized **Laravel API** for robust data handling and **Vue.js** with **Vuex** for a dynamic, high-speed user experience. (**Vue.js, Laravel, API, Vuex, Vuetify**)

[US-BasedAutomotive Center] - thidaautocenter.com

Achievement: Delivered a robust e-commerce and information platform for a US-based client within a **2-month** timeline, demonstrating rapid development and deployment capability.

Technical Focus: Integrated **Vue.js** components within a **PHP** backend environment to modernize and enhance the site's interactivity and user flow. (**PHP, Vue.js, Bootstrap**)

[Local Design Agency] - creativecrus.zakerxa.com

Achievement: Designed and implemented a comprehensive **Vue.js/Laravel SPA** site for a local owner, managing the project from wireframe to final deployment in **2-month**.

Technical Focus: Utilized **Laravel API** for robust data handling and **Vue.js** with **Vuex** for a dynamic, high-speed user experience. (**Vue.js, Laravel, API, Vuex, Vuetify**)

Open Source & Technical Contributions

NPM Contributions: Developed and maintained highly reusable **Vue** components published on NPM, demonstrating commitment to modularity and community contribution ~

@zakerxa/vue-multiple-image-upload

@zakerxa/vue-laravel-pagination

Mail System Integration: Designed and implemented reliable transactional and bulk **email** systems for multiple client platforms.

Advanced Architectural Achievement : Real-Time Multiplayer Game

I successfully designed and deployed a complex, low-latency Single-Page Application (SPA) that demonstrates mastery of real-time systems.

Core Challenge: To achieve seamless, instantaneous player interaction and state synchronization without relying on constant polling.

Solution & Architecture: Leveraged the Laravel/Vue.js ecosystem and Pusher (via Laravel WebSockets) to establish bidirectional, real-time communication. This architecture ensures that all connected clients receive game updates instantly.

Performance Innovation: Implemented a custom "Smart Sleep" Game Check Timer—a proprietary logic designed to efficiently manage server resources. This optimization maintains low latency during active play while preventing unnecessary load spikes on the server and database.

Resilient UX and State Persistence: Implemented robust user experience (UX) resilience features, including automatic reconnection and game state persistence. If a user temporarily drops connection, the system preserves their session, allowing them to seamlessly resume play upon return. The system also incorporates automatic room cleanup logic (refresh and cleanup after 15s inactivity) to manage server resources efficiently.

Full-Stack Ownership: Demonstrated comprehensive technical control over the entire solution, from designing the robust Laravel API and advanced Vuex state management to building the final product and managing its production deployment.
